

CHEM11045 *Chemical Investigation and Theory*

Term 1 - 2019

Profile information current as at 03/05/2024 04:01 am

All details in this unit profile for CHEM11045 have been officially approved by CQUniversity and represent a learning partnership between the University and you (our student). The information will not be changed unless absolutely necessary and any change will be clearly indicated by an approved correction included in the profile.

General Information

Overview

In Chemical Investigation and Theory you will learn about chemical bonding theories and apply these to justify the observed properties of matter. This unit will extend your knowledge of nuclear chemistry by introducing different types of nuclear radiation and the representation of these processes by chemical equations and also the application of half-life calculations. You will use the First Law of Thermodynamics to study heat energies associated with chemical reactions and also consider the effects of changing conditions on established chemical equilibria. The nature of solutions will be investigated with particular focus on colligative properties and the Ideal Gas Equation will be used to describe the nature of gases. Aspects of environmental chemistry will be introduced.

Details

Career Level: *Undergraduate*

Unit Level: *Level 1*

Credit Points: 6

Student Contribution Band: 8

Fraction of Full-Time Student Load: 0.125

Pre-requisites or Co-requisites

There are no requisites for this unit.

Important note: Students enrolled in a subsequent unit who failed their pre-requisite unit, should drop the subsequent unit before the census date or within 10 working days of Fail grade notification. Students who do not drop the unit in this timeframe cannot later drop the unit without academic and financial liability. See details in the [Assessment Policy and Procedure \(Higher Education Coursework\)](#).

Offerings For Term 1 - 2019

- Bundaberg
- Online
- Rockhampton

Attendance Requirements

All on-campus students are expected to attend scheduled classes - in some units, these classes are identified as a mandatory (pass/fail) component and attendance is compulsory. International students, on a student visa, must maintain a full time study load and meet both attendance and academic progress requirements in each study period (satisfactory attendance for International students is defined as maintaining at least an 80% attendance record).

Website

[This unit has a website, within the Moodle system, which is available two weeks before the start of term. It is important that you visit your Moodle site throughout the term. Please visit Moodle for more information.](#)

Class and Assessment Overview

Recommended Student Time Commitment

Each 6-credit Undergraduate unit at CQUniversity requires an overall time commitment of an average of 12.5 hours of study per week, making a total of 150 hours for the unit.

Class Timetable

Assessment Overview

1. **Written Assessment**

Weighting: 20%

2. **Online Quiz(zes)**

Weighting: 30%

3. **Examination**

Weighting: 50%

Assessment Grading

This is a graded unit: your overall grade will be calculated from the marks or grades for each assessment task, based on the relative weightings shown in the table above. You must obtain an overall mark for the unit of at least 50%, or an overall grade of 'pass' in order to pass the unit. If any 'pass/fail' tasks are shown in the table above they must also be completed successfully ('pass' grade). You must also meet any minimum mark requirements specified for a particular assessment task, as detailed in the 'assessment task' section (note that in some instances, the minimum mark for a task may be greater than 50%). Consult the [University's Grades and Results Policy](#) for more details of interim results and final grades.

CQUniversity Policies

All University policies are available on the [CQUniversity Policy site](#).

You may wish to view these policies:

- Grades and Results Policy
- Assessment Policy and Procedure (Higher Education Coursework)
- Review of Grade Procedure
- Student Academic Integrity Policy and Procedure
- Monitoring Academic Progress (MAP) Policy and Procedure – Domestic Students
- Monitoring Academic Progress (MAP) Policy and Procedure – International Students
- Student Refund and Credit Balance Policy and Procedure
- Student Feedback – Compliments and Complaints Policy and Procedure
- Information and Communications Technology Acceptable Use Policy and Procedure

This list is not an exhaustive list of all University policies. The full list of University policies are available on the [CQUniversity Policy site](#).

Unit Learning Outcomes

On successful completion of this unit, you will be able to:

1. Describe the structure of the atom and its sub-atomic particles and relate this to the trends observed in the Periodic Table
2. Apply bonding theories to explain the shape, polarity and bonding that occurs in and between molecules
3. Describe the composition and synthesis of organic polymers
4. Describe the nature of colligative properties
5. Apply chemical laws to explain chemical reactions and gas behaviour
6. Describe types of nuclear radiation and perform half life calculations
7. Discuss important reactions in the environment.

Schedule

Week 1 - 11 Mar 2019

Module/Topic	Chapter	Events and Submissions/Topic
Introduction to atomic structure, quantum numbers and the Periodic Table	Lecture 1: Atomic Structure	
	1.1 The essential concepts in brief 1.3 The structure of the atom 1.5 Electrons in atoms	
	Lecture 2: The Periodic Table - layout, groups, periods, blocks	
	1.4 The Periodic Table of the Elements	
	Lecture 3: The nature of electrons - quantum numbers	
	4.4 Quantisation and quantum numbers	

Week 2 - 18 Mar 2019

Module/Topic	Chapter	Events and Submissions/Topic
Electronic configuration and Periodicity	Lecture 1: Electronic orbitals and the Periodic Table	
	4.5 Atomic orbital electron distributions and energies	
	Lecture 2: Electronic configurations and valence electrons	
	4.6 Structure of the Periodic Table 4.7 Electron configurations - only up to Configuration of ions	
	Lecture 3: Trends in the Periodic Table	
	4.8 Periodicity of atomic properties	

Week 3 - 25 Mar 2019

Module/Topic	Chapter	Events and Submissions/Topic
--------------	---------	------------------------------

Lewis Dot structures and Valence Shell Electron Pair Repulsion Theory (VSEPR)	Lecture 1: Introduction to atomic bonding	
	5.1 Fundamentals of bonding 5.2 Ionic Bonding	
	Lecture 2: Lewis Structures	Assessment Item 2, online quiz (1) due 11:55 PM (AEST) Sunday March 31
	5.3 Lewis Structures	
	Lecture 3: Fundamentals of VSEPR	
	5.4 VSEPR theory	

Week 4 - 01 Apr 2019

Module/Topic	Chapter	Events and Submissions/Topic
Valence Bond Theory	Lecture 1: Properties of covalent bonds	
	5.5 Properties of Covalent Bonds	
	Lecture 2: Valence Bond Theory	
	5.6 Valence Bond Theory	
	Lecture 3: Worked examples of VSEPR and VBT	
	(no specific readings)	

Week 5 - 08 Apr 2019

Module/Topic	Chapter	Events and Submissions/Topic
Molecular Orbital Theory	Lecture 1: Molecular orbital theory - homonuclear diatomic molecules - s orbital overlap	
	5.7 Molecular orbital theory: diatomic molecules - to end of Molecular orbitals of H ₂	
	Lecture 2: Molecular orbital theory - homonuclear diatomic molecules - p orbital overlap	
	5.7 Molecular orbital theory: diatomic molecules - Molecular orbitals of O ₂	
	Lecture 3: Heteronuclear diatomic molecules	
	5.7 Molecular orbital theory: Heteronuclear diatomic molecules	

Vacation Week - 15 Apr 2019

Module/Topic	Chapter	Events and Submissions/Topic
--------------	---------	------------------------------

Week 6 - 22 Apr 2019

Module/Topic	Chapter	Events and Submissions/Topic
--------------	---------	------------------------------

Lecture 1: Intermolecular Forces

6.8 Intermolecular forces

Lecture 2: Macroscopic properties of liquids and solids

7.1 Liquids

7.2 Solids

Assessment item 1 Written Assessment (Task A) due 11:55 PM (AEST) Friday April 26, 2019

Liquids and solids

Lecture 3: Phase changes and phase diagrams

7.3 Phase changes

7.4 Order in solids

Week 7 - 29 Apr 2019

Module/Topic

Chapter

Events and Submissions/Topic

Lecture 1: Nomenclature of inorganic compounds

2.3 Nomenclature (up to and not including naming organic compounds)

Lecture 2: Solubility and solubility product

10.1 Introduction to solutions and solubility

10.4 Carry out calculations involving slightly soluble salts

Lecture 3: Colligative properties

10.5 Quantify the effects that arise in solutions as a result of colligative properties.

Solutions and solubilities

Week 8 - 06 May 2019

Module/Topic

Chapter

Events and Submissions/Topic

Lecture 1: Gas behaviour

6.1 The states of matter 6.2 Describing gases

Lecture 2: Properties of gas mixtures

6.4 Gas mixtures

Lecture 3: Applying the ideal Gas Equation

6.5 Applications of the Ideal Gas equation 6.6 Gas Stoichiometry

Gases

Assessment Item 2, online quiz (2) due 11:55 PM (AEST) Sunday May 10, 2019

Week 9 - 13 May 2019

Module/Topic

Chapter

Events and Submissions/Topic

Chemistry in the Environment

No readings from the text.

Participation recommended in the dedicated forum for discussion of important reactions in the environment.

Week 10 - 20 May 2019

Module/Topic	Chapter	Events and Submissions/Topic
Polymers	Lecture 1: Introduction to polymers	
	26.1 The architecture of polymers 26.2 Use correct notation and nomenclature to describe polymers	
	Lecture 2: Condensation polymers	
	26.3 Formation of polymers (only condensation or step-growth polymers)	
	Lecture 3: Addition polymers	
	26.3 Formation of polymers (only addition or chain-growth polymers)	

Week 11 - 27 May 2019

Module/Topic	Chapter	Events and Submissions/Topic
Nuclear Chemistry	Lecture 1: Nuclear stability and decay	
	27.1 Nuclear stability	
	27.2 Unstable nuclei	
	Lecture 2: Formation of new elements - dating methods	Assessment item 1 Written Assessment (Task B) due 11:55 PM (AEST) Friday May 31, 2019
	27.3 Synthesis of new elements	
	27.4 Radioactive dating methods	
	Lecture 3: Applications of nuclear processes	
	27.5 Applications of nuclear processes	

Week 12 - 03 Jun 2019

Module/Topic	Chapter	Events and Submissions/Topic
Review		Assessment Item 2, online quiz (3) due 11:55 PM (AEST) Sunday June 7, 2019

Review/Exam Week - 10 Jun 2019

Module/Topic	Chapter	Events and Submissions/Topic

Exam Week - 17 Jun 2019

Module/Topic	Chapter	Events and Submissions/Topic

Assessment Tasks**1 Written Assessment - Bonding Theories, Organic Polymers and Colligative Properties****Assessment Type**

Written Assessment

Task Description

There will be two components to this written assessment, Task A and Task B.

Task A

This task requires you to explain the bonding in various molecules using bonding theories discussed in weeks 3, 4 and 5.

You will be required to show any calculations and to clearly draw the molecule bonding according to the relevant theory used.

Task B

This task will require you to explain the nature of colligative properties and perform relevant calculations, discuss polymer formation, and reactions in the environment.

Assessment Due Date

Part A of this assessment is Due Friday April 26, @ 11:55 PM (End of week 6) Part B of this assessment is Due Friday May 31, @ 11:55 PM (End of week 11)

Return Date to Students

Part A of this assessment will be returned by end of week 8. Part B will be returned by Monday of Review/Exam Week

Weighting

20%

Minimum mark or grade

30 %

Assessment Criteria

Marks for each question will be awarded as indicated on the assessment item.

Marks will be awarded for

- application and explanation of relevant bonding theories
- relevance and clarity of diagrams.
- Clarity of explanations
- correct calculations and use of significant figures and units.

All working must be shown.

Referencing Style

Submission

Online

Learning Outcomes Assessed

- Apply bonding theories to explain the shape, polarity and bonding that occurs in and between molecules
- Describe the composition and synthesis of organic polymers
- Describe the nature of colligative properties
- Discuss important reactions in the environment.

Graduate Attributes

- Communication
- Problem Solving
- Critical Thinking
- Information Literacy
- Information Technology Competence

2 Online Quizzes

Assessment Type

Online Quiz(zes)

Task Description

This assessment is comprised of 3 online quizzes which will assess your understanding of the topics presented in this unit. Completing these quizzes will give you an indication of your understanding of the concepts presented each week and encourage you to stay on track with your study. This assessment requires you to apply the concepts to answer a series of multiple choice questions. All questions in each quiz are of equal value.

The 3 online quizzes will contribute a total of 30% of the assessment for this unit, each quiz contributing 10%.

Quiz 1 will cover Atomic Structure, Periodic Table, electronic configurations,

Quiz 2 will cover Gases,

Quiz 3 will cover Nuclear chemistry

The quizzes are not timed and you are allowed two attempts; the highest score of the two attempts will be recorded.

Note that questions are generated randomly and you will receive different questions on subsequent attempts.

Number of Quizzes

3

Frequency of Quizzes

Other

Assessment Due Date

The quizzes will be due at 11:55 PM on the Sunday at the end of Weeks 3, 8 and 12.

Return Date to Students

Quiz results will be released after the completion of each attempt. Answers to the quiz questions will be released after the quiz has closed.

Weighting

30%

Assessment Criteria

All questions are of equal weighting. One mark will be awarded for each correct response. Incorrect responses will not incur a penalty.

Submission Instructions

Complete each quiz by following the link on the Moodle site.

Learning Outcomes Assessed

- Describe the structure of the atom and its sub-atomic particles and relate this to the trends observed in the Periodic Table
- Apply chemical laws to explain chemical reactions and gas behaviour
- Describe types of nuclear radiation and perform half life calculations

Graduate Attributes

- Problem Solving
- Critical Thinking
- Information Literacy
- Information Technology Competence

Examination

Outline

Complete an invigilated examination.

Date

During the examination period at a CQUniversity examination centre.

Weighting

50%

Length

120 minutes

Minimum mark or grade

40

Exam Conditions

Open Book.

Materials

Dictionary - non-electronic, concise, direct translation only (dictionary must not contain any notes or comments).
Calculator - all non-communicable calculators, including scientific, programmable and graphics calculators are authorised

Academic Integrity Statement

As a CQUniversity student you are expected to act honestly in all aspects of your academic work.

Any assessable work undertaken or submitted for review or assessment must be your own work. Assessable work is any type of work you do to meet the assessment requirements in the unit, including draft work submitted for review and feedback and final work to be assessed.

When you use the ideas, words or data of others in your assessment, you must thoroughly and clearly acknowledge the source of this information by using the correct referencing style for your unit. Using others' work without proper acknowledgement may be considered a form of intellectual dishonesty.

Participating honestly, respectfully, responsibly, and fairly in your university study ensures the CQUniversity qualification you earn will be valued as a true indication of your individual academic achievement and will continue to receive the respect and recognition it deserves.

As a student, you are responsible for reading and following CQUniversity's policies, including the [Student Academic Integrity Policy and Procedure](#). This policy sets out CQUniversity's expectations of you to act with integrity, examples of academic integrity breaches to avoid, the processes used to address alleged breaches of academic integrity, and potential penalties.

What is a breach of academic integrity?

A breach of academic integrity includes but is not limited to plagiarism, self-plagiarism, collusion, cheating, contract cheating, and academic misconduct. The Student Academic Integrity Policy and Procedure defines what these terms mean and gives examples.

Why is academic integrity important?

A breach of academic integrity may result in one or more penalties, including suspension or even expulsion from the University. It can also have negative implications for student visas and future enrolment at CQUniversity or elsewhere. Students who engage in contract cheating also risk being blackmailed by contract cheating services.

Where can I get assistance?

For academic advice and guidance, the [Academic Learning Centre \(ALC\)](#) can support you in becoming confident in completing assessments with integrity and of high standard.

What can you do to act with integrity?

Be Honest

If your assessment task is done by someone else, it would be dishonest of you to claim it as your own

Seek Help

If you are not sure about how to cite or reference in essays, reports etc, then seek help from your lecturer, the library or the Academic Learning Centre (ALC)

Produce Original Work

Originality comes from your ability to read widely, think critically, and apply your gained knowledge to address a question or problem
