

CHEM11045 *Chemical Investigation and Theory*

Term 1 - 2020

Profile information current as at 26/04/2024 05:42 am

All details in this unit profile for CHEM11045 have been officially approved by CQUniversity and represent a learning partnership between the University and you (our student). The information will not be changed unless absolutely necessary and any change will be clearly indicated by an approved correction included in the profile.

Corrections

Unit Profile Correction added on 19-04-20

The end of term examination has now been changed to an alternate form of assessment. Please see your Moodle site for details of the assessment.

General Information

Overview

In Chemical Investigation and Theory you will learn about chemical bonding theories and apply these to justify the observed properties of matter. This unit will extend your knowledge of nuclear chemistry by introducing different types of nuclear radiation and the representation of these processes by chemical equations and also the application of half-life calculations. You will use the First Law of Thermodynamics to study heat energies associated with chemical reactions and also consider the effects of changing conditions on established chemical equilibria. The nature of solutions will be investigated with particular focus on colligative properties and the Ideal Gas Equation will be used to describe the nature of gases. Aspects of environmental chemistry will be introduced.

Details

Career Level: *Undergraduate*

Unit Level: *Level 1*

Credit Points: 6

Student Contribution Band: 8

Fraction of Full-Time Student Load: 0.125

Pre-requisites or Co-requisites

There are no requisites for this unit.

Important note: Students enrolled in a subsequent unit who failed their pre-requisite unit, should drop the subsequent unit before the census date or within 10 working days of Fail grade notification. Students who do not drop the unit in this timeframe cannot later drop the unit without academic and financial liability. See details in the [Assessment Policy and Procedure \(Higher Education Coursework\)](#).

Offerings For Term 1 - 2020

- Bundaberg
- Online
- Rockhampton

Attendance Requirements

All on-campus students are expected to attend scheduled classes – in some units, these classes are identified as a mandatory (pass/fail) component and attendance is compulsory. International students, on a student visa, must maintain a full time study load and meet both attendance and academic progress requirements in each study period (satisfactory attendance for International students is defined as maintaining at least an 80% attendance record).

Website

[This unit has a website, within the Moodle system, which is available two weeks before the start of term. It is important that you visit your Moodle site throughout the term. Please visit Moodle for more information.](#)

Class and Assessment Overview

Recommended Student Time Commitment

Each 6-credit Undergraduate unit at CQUniversity requires an overall time commitment of an average of 12.5 hours of study per week, making a total of 150 hours for the unit.

Class Timetable

[Regional Campuses](#)

Bundaberg, Cairns, Emerald, Gladstone, Mackay, Rockhampton, Townsville

[Metropolitan Campuses](#)

Adelaide, Brisbane, Melbourne, Perth, Sydney

Assessment Overview

1. **Online Quiz(zes)**

Weighting: 30%

2. **Written Assessment**

Weighting: 20%

3. **Examination**

Weighting: 50%

Assessment Grading

This is a graded unit: your overall grade will be calculated from the marks or grades for each assessment task, based on the relative weightings shown in the table above. You must obtain an overall mark for the unit of at least 50%, or an overall grade of 'pass' in order to pass the unit. If any 'pass/fail' tasks are shown in the table above they must also be completed successfully ('pass' grade). You must also meet any minimum mark requirements specified for a particular assessment task, as detailed in the 'assessment task' section (note that in some instances, the minimum mark for a task may be greater than 50%). Consult the [University's Grades and Results Policy](#) for more details of interim results and final grades.

CQUniversity Policies

All University policies are available on the [CQUniversity Policy site](#).

You may wish to view these policies:

- Grades and Results Policy
- Assessment Policy and Procedure (Higher Education Coursework)
- Review of Grade Procedure
- Student Academic Integrity Policy and Procedure
- Monitoring Academic Progress (MAP) Policy and Procedure – Domestic Students
- Monitoring Academic Progress (MAP) Policy and Procedure – International Students
- Student Refund and Credit Balance Policy and Procedure
- Student Feedback – Compliments and Complaints Policy and Procedure
- Information and Communications Technology Acceptable Use Policy and Procedure

This list is not an exhaustive list of all University policies. The full list of University policies are available on the [CQUniversity Policy site](#).

Previous Student Feedback

Feedback, Recommendations and Responses

Every unit is reviewed for enhancement each year. At the most recent review, the following staff and student feedback items were identified and recommendations were made.

Feedback from Have your Say

Feedback

Students found the tutorials beneficial to their study and understanding of topics, but expressed that they would have liked the inclusion of review quizzes similar to those in other first year chemistry units.

Recommendation

Tutorial questions were carefully selected by the academic team to reinforce key unit topics to students. The tutorial questions provide a more comprehensive review of the weekly topics than review quizzes and provides students a more appropriate gauge of their progress in the unit.

Feedback from Have your Say

Feedback

A number of students stated that the examination was difficult to prepare for and the information provided regarding format and content should have been more detailed.

Recommendation

This was the first offering of the unit, consequently, details pertaining to the format and content of the examination were provided to students following requests for additional information regarding the examination and its layout. Moreover, the other assessments in the unit were designed to familiarise students to the format of questions they could expect in the exam, and this was highlighted to students.

Feedback from Have your Say

Feedback

The majority of students indicated that overall they enjoyed the course, the following aspects were highlighted 1. Delivery of content 2. Approachability of staff and their consistent reliable response to queries 3. Staff interactions 4. Use of online assessment pieces

Recommendation

It is very encouraging to hear students found the unit beneficial and enjoyable, as it is something the chemistry team as a whole have put significant effort and time into across all the units we are involved with.

Unit Learning Outcomes

On successful completion of this unit, you will be able to:

1. Describe the structure of the atom and its sub-atomic particles and relate this to the trends observed in the Periodic Table
2. Apply bonding theories to explain the shape, polarity and bonding that occurs in and between molecules
3. Describe the composition and synthesis of organic polymers
4. Describe the nature of colligative properties
5. Apply chemical laws to explain chemical reactions and gas behaviour
6. Describe types of nuclear radiation and perform half life calculations
7. Discuss important reactions in the environment.

Schedule

Week 1 - 09 Mar 2020

Module/Topic	Chapter	Events and Submissions/Topic
--------------	---------	------------------------------

Lecture 1: Atomic Structure

- 1.1 The essential concepts in brief
- 1.3 The structure of the atom
- 1.5 Electrons in atoms

Introduction to atomic structure, quantum numbers and the Periodic Table

Lecture 2: The Periodic Table - layout, groups, periods, blocks

- 1.4 The Periodic Table of the Elements

Lecture 3: The nature of electrons - quantum numbers

- 4.4 Quantisation and quantum numbers

Week 2 - 16 Mar 2020

Module/Topic	Chapter	Events and Submissions/Topic
Electronic configuration and Periodicity	Lecture 1: Electronic orbitals and the Periodic Table	
	4.5 Atomic orbital electron distributions and energies	
	Lecture 2: Electronic configurations and valence electrons	
	4.6 Structure of the Periodic Table 4.7 Electron configurations - only up to Configuration of ions	
	Lecture 3: Trends in the Periodic Table	
	4.8 Periodicity of atomic properties	

Week 3 - 23 Mar 2020

Module/Topic	Chapter	Events and Submissions/Topic
Lewis Dot structures and Valence Shell Electron Pair Repulsion Theory (VSEPR)	Lecture 1: Introduction to atomic bonding	
	5.1 Fundamentals of bonding 5.2 Ionic Bonding	
	Lecture 2: Lewis Structures	Assessment Item 1, Online Quiz (1) due 11:55 PM (AEST) Sunday 29 March 2020
	5.3 Lewis Structures	
	Lecture 3: Fundamentals of VSEPR	
	5.4 VSEPR theory	

Week 4 - 30 Mar 2020

Module/Topic	Chapter	Events and Submissions/Topic
--------------	---------	------------------------------

	Lecture 1: Properties of covalent bonds
	5.5 Properties of Covalent Bonds
Valence Bond Theory	Lecture 2: Valence Bond Theory
	5.6 Valence Bond Theory
	Lecture 3: Worked examples of VSEPR and VBT
	(no specific readings)

Week 5 - 06 Apr 2020

Module/Topic	Chapter	Events and Submissions/Topic
	Lecture 1: Molecular orbital theory - homonuclear diatomic molecules - s orbital overlap	
	5.7 Molecular orbital theory: diatomic molecules - to end of Molecular orbitals of H ₂	
Molecular Orbital Theory	Lecture 2: Molecular orbital theory - homonuclear diatomic molecules - p orbital overlap	
	5.7 Molecular orbital theory: diatomic molecules - Molecular orbitals of O ₂	
	Lecture 3: Heteronuclear diatomic molecules	
	5.7 Molecular orbital theory: Heteronuclear diatomic molecules	

Vacation Week - 13 Apr 2020

Module/Topic	Chapter	Events and Submissions/Topic
--------------	---------	------------------------------

Week 6 - 20 Apr 2020

Module/Topic	Chapter	Events and Submissions/Topic
	Lecture 1: Intermolecular Forces	
	6.8 Intermolecular forces	
	Lecture 2: Macroscopic properties of liquids and solids	
Liquids and solids	7.1 Liquids	Assessment Item 2, Written Assessment (Task A) due 11:55 PM (AEST) Friday 24 April 2020
	7.2 Solids	
	Lecture 3: Phase changes and phase diagrams	
	7.3 Phase changes	
	7.4 Order in solids	

Week 7 - 27 Apr 2020

Module/Topic	Chapter	Events and Submissions/Topic
--------------	---------	------------------------------

Lecture 1: Nomenclature of inorganic compounds

2.3 Nomenclature (up to and not including naming organic compounds)

Lecture 2: Solubility and solubility product

10.1 Introduction to solutions and solubility

10.4 Carry out calculations involving slightly soluble salts

Lecture 3: Colligative properties

10.5 Quantify the effects that arise in solutions as a result of colligative properties.

Solutions and solubilities

Week 8 - 04 May 2020

Module/Topic	Chapter	Events and Submissions/Topic
Gases	Lecture 1: Gas behaviour	
	6.1 The states of matter 6.2 Describing gases	
	Lecture 2: Properties of gas mixtures	
	6.4 Gas mixtures	Assessment Item 1, Online Quiz (2) due 11:55 PM (AEST) Sunday 10 May 2020
	Lecture 3: Applying the ideal Gas Equation	
	6.5 Applications of the Ideal Gas equation 6.6 Gas Stoichiometry	

Week 9 - 11 May 2020

Module/Topic	Chapter	Events and Submissions/Topic
Chemistry in the Environment	No readings from the text.	

Week 10 - 18 May 2020

Module/Topic	Chapter	Events and Submissions/Topic
Polymers	Lecture 1: Introduction to polymers	
	26.1 The architecture of polymers 26.2 Use correct notation and nomenclature to describe polymers	
	Lecture 2: Condensation polymers	
	26.3 Formation of polymers (only condensation or step-growth polymers)	
	Lecture 3: Addition polymers	
	26.3 Formation of polymers (only addition or chain-growth polymers)	

Week 11 - 25 May 2020

Module/Topic	Chapter	Events and Submissions/Topic
--------------	---------	------------------------------

Nuclear Chemistry	Lecture 1: Nuclear stability and decay	
	27.1 Nuclear stability	
	27.2 Unstable nuclei	
	Lecture 2: Formation of new elements - dating methods	Assessment Item 2, Written Assessment (Task B) due 11:55 PM (AEST) Friday 29 May 2020
	27.3 Synthesis of new elements	
	27.4 Radioactive dating methods	
	Lecture 3: Applications of nuclear processes	
	27.5 Applications of nuclear processes	

Week 12 - 01 Jun 2020

Module/Topic	Chapter	Events and Submissions/Topic
Review		Assessment Item 1, Online Quiz (3) due 11:55 PM (AEST) Sunday 7 June 2020

Review/Exam Week - 08 Jun 2020

Module/Topic	Chapter	Events and Submissions/Topic
--------------	---------	------------------------------

Exam Week - 15 Jun 2020

Module/Topic	Chapter	Events and Submissions/Topic
--------------	---------	------------------------------

Assessment Tasks

1 Online Quizzes - Atomic Structure, Gases, Nuclear Chemistry

Assessment Type

Online Quiz(zes)

Task Description

This assessment is comprised of three (3) online quizzes which will assess your understanding of topics presented in this unit. This assessment requires you to apply the concepts to answer a series of multiple choice questions. All questions in each quiz are of equal value.

The three online quizzes will contribute a total of 30% of the assessment for this unit, each quiz contributing 10%.

Quiz 1 will cover Atomic Structure, Periodic Table, electronic configurations,

Quiz 2 will cover Gases,

Quiz 3 will cover Nuclear chemistry

The quizzes are not timed and you are allowed two attempts; the highest score of the two attempts will be recorded.

Note that questions are generated randomly and you will receive different questions on subsequent attempts.

Number of Quizzes

3

Frequency of Quizzes

Other

Assessment Due Date

The quizzes will be due at 11:55 PM (AEST) on the Sunday at the end of Weeks 3, 8 and 12.

Return Date to Students

Quiz results will be released after the completion of each attempt. Answers to the quiz questions will be released after the quiz has closed.

Weighting

30%

Assessment Criteria

All questions are of equal weighting. One mark will be awarded for each correct response.

Referencing Style

Submission

Online

Submission Instructions

Complete each quiz by following the link on the Moodle site.

Learning Outcomes Assessed

- Describe the structure of the atom and its sub-atomic particles and relate this to the trends observed in the Periodic Table
- Apply chemical laws to explain chemical reactions and gas behaviour
- Describe types of nuclear radiation and perform half life calculations

Graduate Attributes

- Problem Solving
- Critical Thinking
- Information Literacy
- Information Technology Competence

2 Written Assessment - Bonding Theories, Colligative Properties, Chemistry in the Environment, Polymers.

Assessment Type

Written Assessment

Task Description

There will be two components to this written assessment, Task A and Task B.

Task A

This task requires you to

- Explain the bonding in various molecules using bonding theories discussed in weeks 3, 4 and 5
- Show any calculations
- Clearly draw the molecule bonding according to the relevant theory used

Task B

This task will require you to

- Explain the nature of colligative properties and perform relevant calculations
- Discuss polymer formation
- Discuss reactions in the environment

Assessment Due Date

Part A of this assessment is due 11:55 PM (AEST), Friday 24 April (End of week 6). Part B of this assessment is due 11:55 PM (AEST), Friday 29 May (End of week 11)

Return Date to Students

Part A of this assessment will be returned by end of week 8. Part B will be returned by Monday of Review/Exam Week

Weighting

20%

Minimum mark or grade

30 %

Assessment Criteria

Marks for each question will be awarded as indicated on the Assessment Item 2, Task A and B documents, provided on Moodle.

Marks will be awarded for

- Application and explanation of relevant bonding theories
- Relevance and clarity of diagrams
- Clarity of explanations
- Demonstrated understanding of the nature of colligative properties
- Demonstrated understanding of the composition and synthesis of organic polymers
- Accurate, informed discussion of important reactions in the environment
- Correct calculations and use of significant figures and units

Note: all working must be shown

Academic Integrity Statement

As a CQUniversity student you are expected to act honestly in all aspects of your academic work.

Any assessable work undertaken or submitted for review or assessment must be your own work. Assessable work is any type of work you do to meet the assessment requirements in the unit, including draft work submitted for review and feedback and final work to be assessed.

When you use the ideas, words or data of others in your assessment, you must thoroughly and clearly acknowledge the source of this information by using the correct referencing style for your unit. Using others' work without proper acknowledgement may be considered a form of intellectual dishonesty.

Participating honestly, respectfully, responsibly, and fairly in your university study ensures the CQUniversity qualification you earn will be valued as a true indication of your individual academic achievement and will continue to receive the respect and recognition it deserves.

As a student, you are responsible for reading and following CQUniversity's policies, including the [Student Academic Integrity Policy and Procedure](#). This policy sets out CQUniversity's expectations of you to act with integrity, examples of academic integrity breaches to avoid, the processes used to address alleged breaches of academic integrity, and potential penalties.

What is a breach of academic integrity?

A breach of academic integrity includes but is not limited to plagiarism, self-plagiarism, collusion, cheating, contract cheating, and academic misconduct. The Student Academic Integrity Policy and Procedure defines what these terms mean and gives examples.

Why is academic integrity important?

A breach of academic integrity may result in one or more penalties, including suspension or even expulsion from the University. It can also have negative implications for student visas and future enrolment at CQUniversity or elsewhere. Students who engage in contract cheating also risk being blackmailed by contract cheating services.

Where can I get assistance?

For academic advice and guidance, the [Academic Learning Centre \(ALC\)](#) can support you in becoming confident in completing assessments with integrity and of high standard.

What can you do to act with integrity?

Be Honest

If your assessment task is done by someone else, it would be dishonest of you to claim it as your own

Seek Help

If you are not sure about how to cite or reference in essays, reports etc, then seek help from your lecturer, the library or the Academic Learning Centre (ALC)

Produce Original Work

Originality comes from your ability to read widely, think critically, and apply your gained knowledge to address a question or problem
