General Information

Overview

Cybersecurity professionals are expected to design, analyse and validate computer systems and networks to maintain operational continuity in the face of attacks. In this unit, you will learn about common types of attacks and the tools and techniques used to prevent, detect and respond to them. You will develop skills in virtualisation and cloud services to address cybersecurity challenges. Additionally, you will gain experience with specialised cybersecurity tools for detecting vulnerabilities, monitoring network traffic and responding to attacks.

Previous Student Feedback

Feedback, Recommendations and Responses

Every unit is reviewed for enhancement each year. At the most recent review, the following staff and student feedback items were identified and recommendations were made.

Feedback from Teaching Team Reflections

Feedback

Some students have computers that have difficulty running the required virtual machines.

Recommendation

Provide a cloud-hosted alternative for running virtual machines.

Feedback from Teaching Team Reflections and Student Evaluations

Feedback

The assessment tasks are individual and overly prescriptive. Unfortunately, the assessment has lost the original 'detective hunt' experience.

Recommendation

Revise the recent assessment tasks to incorporate group work and exploratory learning.
