General Information

Overview

Artificial Intelligence (AI) involves developing systems that are autonomous and intelligent. This unit introduces you to contemporary and emerging AI technologies to address problems such as medical diagnosis, manufacturing optimisation and transport scheduling. You will investigate the application of AI technologies in areas such as computer vision, machine learning and deep learning. Fundamental AI concepts will be considered, including artificial neural networks and model validation techniques. You will develop AI systems using industry tools and learn to develop a business case for an AI system.

Previous Student Feedback

Feedback, Recommendations and Responses

Every unit is reviewed for enhancement each year. At the most recent review, the following staff and student feedback items were identified and recommendations were made.

Feedback from Student Evaluations

Feedback

The transition to AWS SageMaker posed challenges for students.

Recommendation

It is recommended to remove SageMaker to revert to Jupyter Notebook for lab activities.

Feedback from Student Evaluations

Feedback

One of the assessment deadlines was adjusted during the term, which created some confusion among the students.

Recommendation

Any changes to assessments during the term will be clearly labelled with differences from the previous version and with a short video explaining the update.
