General Information

Overview
This unit equips you with the skills and knowledge to design enterprise-level networks using contemporary on-premises, wireless, cloud, and cybersecurity technologies. It develops your ability to gather business and technical requirements and to justify the selection of networking and security solutions where competing priorities such as cost, performance, risk, security, and business objectives must be balanced. The unit also covers the use of industry-standard tools and techniques for network and security design, deployment, management, and protection, including automation, remote access, high availability, testing, monitoring, and documentation.
