## **General Information**

#### Overview

This unit is devoted to the design and implementation of Android and iOS mobile applications. Native mobile programming languages will form the basis upon which programming techniques and design patterns will be developed for creating standalone applications. Commonly used mobile tools and frameworks for mobile application development are used. All stages of software development from the initial idea, through to development and testing will be covered. Consideration will be given to the business case from the developers' point of view. Some examination of how to market mobile apps is also undertaken. Research skills will be introduced as a means of keeping up to date with the changing mobile development landscape.

### Previous Student Feedback

# Feedback, Recommendations and Responses

Every unit is reviewed for enhancement each year. At the most recent review, the following staff and student feedback items were identified and recommendations were made.

#### Feedback from In class

#### Feedback

Students have expressed difficulty in meeting group requirements for the Android assignment, particularly when there is limited campus enrolments, making it challenging to find teammates.

#### Recommendation

It is recommended that the Unit Coordinator form groups at the start of each term, incorporating students from different campuses. This approach will ensure that all students can participate in group activities, thereby enhancing their communication and teamwork skills without facing the challenge of finding local teammates.
