General Information

Overview
This unit introduces students to the analysis of the behaviour of objects in motion. You will be able to explain the motion of objects and solve problems involving objects experiencing constant linear and angular acceleration, and constant force and torque; and apply principles of conservation of momentum and energy to solve problems involving moving objects and simple machines. You will be able to solve problems involving friction, kinematics and dynamics, and oscillatory motion, forced vibration and resonance. You will be able to analyse static and dynamic balance of shafts and determine bearing reactions. Students are required to develop a capacity to work and communicate ethically and professionally, as individuals and in teams, to investigate and solve problems and present solutions professionally.

Previous Student Feedback

Feedback, Recommendations and Responses

Every unit is reviewed for enhancement each year. At the most recent review, the following staff and student feedback items were identified and recommendations were made.

Feedback from Student feedback

Feedback
Clear Requirements, Useful Materials, Effective Assessment Learning, Helpful Feedback, Skill Development, Degree Relevance, and Overall Satisfaction.

Recommendation
Details should be kept and continuously improved.

Feedback from Student feedback

Feedback
Provide clearer marking criteria/expectations.

Recommendation
The marking rubric should be added.

Feedback from Student feedback

Feedback
Improve clarity of quiz questions.

Recommendation
Additional explanatory notes should be incorporated into the quiz questions.
