

Profile information current as at 05/05/2024 06:38 am

All details in this unit profile for ENEE14006 have been officially approved by CQUniversity and represent a learning partnership between the University and you (our student). The information will not be changed unless absolutely necessary and any change will be clearly indicated by an approved correction included in the profile.

General Information

Overview

This unit will introduce you to microcontroller basics and their real-world applications. Fundamentals of high-level structured language programming, essential for programming a microcontroller, will be taught in this unit. You will learn about different microcontroller families and their similarities and differences from an application point of view. You will also learn about microcontroller architecture, memory maps, addressing modes, interrupts, timers, counters, and hardware interfacing of a chosen microcontroller. You will learn how to program a microcontroller in a high-level language using an integrated development environment. Advance topics of reading analog inputs, implementation of Universal Synchronous Asynchronous Receiver Transmitter connections with the external world, Pulse Width Modulation, will also be covered in this unit. After learning the fundamentals of hardware interfacing you will practice them in a laboratory using a microcontroller development system based on a specific microcontroller and finally design and prototype a real-world application of the embedded system in your project using the same development system. Online students are required to attend the Residential School.

Details

Career Level: Undergraduate

Unit Level: Level 4 Credit Points: 12

Student Contribution Band: 8

Fraction of Full-Time Student Load: 0.25

Pre-requisites or Co-requisites

Prerequisite: (ENEE13020 Digital Electronics AND ENEE13018 Analogue Electronics) OR ENEX12002 Introductory Electronics

Important note: Students enrolled in a subsequent unit who failed their pre-requisite unit, should drop the subsequent unit before the census date or within 10 working days of Fail grade notification. Students who do not drop the unit in this timeframe cannot later drop the unit without academic and financial liability. See details in the <u>Assessment Policy and Procedure (Higher Education Coursework)</u>.

Offerings For Term 1 - 2020

- Bundaberg
- Cairns
- Gladstone
- Mackay
- Mixed Mode
- Rockhampton

Attendance Requirements

All on-campus students are expected to attend scheduled classes – in some units, these classes are identified as a mandatory (pass/fail) component and attendance is compulsory. International students, on a student visa, must maintain a full time study load and meet both attendance and academic progress requirements in each study period (satisfactory attendance for International students is defined as maintaining at least an 80% attendance record).

Residential Schools

This unit has a Compulsory Residential School for distance mode students and the details are: Click here to see your <u>Residential School Timetable</u>.

Website

This unit has a website, within the Moodle system, which is available two weeks before the start of term. It is important that you visit your Moodle site throughout the term. Please visit Moodle for more information.

Class and Assessment Overview

Recommended Student Time Commitment

Each 12-credit Undergraduate unit at CQUniversity requires an overall time commitment of an average of 25 hours of study per week, making a total of 300 hours for the unit.

Class Timetable

Regional Campuses

Bundaberg, Cairns, Emerald, Gladstone, Mackay, Rockhampton, Townsville

Metropolitan Campuses

Adelaide, Brisbane, Melbourne, Perth, Sydney

Assessment Overview

1. Written Assessment

Weighting: 25%

2. Written Assessment

Weighting: 25% 3. **Portfolio** Weighting: 50%

Assessment Grading

This is a graded unit: your overall grade will be calculated from the marks or grades for each assessment task, based on the relative weightings shown in the table above. You must obtain an overall mark for the unit of at least 50%, or an overall grade of 'pass' in order to pass the unit. If any 'pass/fail' tasks are shown in the table above they must also be completed successfully ('pass' grade). You must also meet any minimum mark requirements specified for a particular assessment task, as detailed in the 'assessment task' section (note that in some instances, the minimum mark for a task may be greater than 50%). Consult the <u>University's Grades and Results Policy</u> for more details of interim results and final grades.

CQUniversity Policies

All University policies are available on the CQUniversity Policy site.

You may wish to view these policies:

- Grades and Results Policy
- Assessment Policy and Procedure (Higher Education Coursework)
- Review of Grade Procedure
- Student Academic Integrity Policy and Procedure
- Monitoring Academic Progress (MAP) Policy and Procedure Domestic Students
- Monitoring Academic Progress (MAP) Policy and Procedure International Students
- Student Refund and Credit Balance Policy and Procedure
- Student Feedback Compliments and Complaints Policy and Procedure
- Information and Communications Technology Acceptable Use Policy and Procedure

This list is not an exhaustive list of all University policies. The full list of University policies are available on the CQUniversity Policy site.

Previous Student Feedback

Feedback, Recommendations and Responses

Every unit is reviewed for enhancement each year. At the most recent review, the following staff and student feedback items were identified and recommendations were made.

Feedback from self

Feedback

Changing the group project to an individual project.

Changing the project from a group project to an individual project was one of the key factors to have high student satisfaction as their marks are directly proportional to their own work, where in previous years the contribution from different group members caused problems in a group. On the other hand, that indirectly forces every student to engage with the unit if they want to be successful.

Feedback from 'Have your say' Survey

Feedback

The worked examples provided students a framework to build upon.

Recommendation

Providing worked examples will be continued.

Feedback from 'Have your say' Survey

Gained knowledge of C programming and applied it in real world applications makes this unit worthwhile and align with the modern engineering world.

Recommendation

This practice will be continued.

Feedback from 'Have your say' Survey

Feedback

A programming fundamentals unit in term 3 prior to this unit would be advantageous to students.

Recommendation

A programming fundamentals unit as an elective will be recommended to students prior to enrolling into this unit if possible.

Unit Learning Outcomes

On successful completion of this unit, you will be able to:

- 1. Apply fundamental structured programming knowledge to develop software solutions
- 2. Program a microcontroller to interface with external devices such as analog and digital sensors, actuators and computers
- 3. Analyse and design microcontroller based real-time applications using a given industry standard development system and software tools
- 4. Prototype an embedded microcontroller system for an authentic application
- 5. Communicate professionally using relevant technical terminology, symbols, and diagrams and effectively document design and prototyped solutions
- 6. Work autonomously and as a team member to analyse problems and present solutions.

The Learning Outcomes for this unit are linked with Engineers Australia's Stage 1 Competency Standard for **Professional Engineers.**

Alignment of Learning Outcomes, Assessment and Graduate Attributes

Textbooks and Resources

Textbooks

There are no required textbooks.

Additional Textbook Information

No prescribed text, but encouraged to follow online C language tutorials at their own phase at the beginning.

IT Resources

You will need access to the following IT resources:

- CQUniversity Student Email
- Internet
- Unit Website (Moodle)
- Access to a document scanner and a software that can create pdf documents.
- A computer with 9 pin serial port or USB to serial converter, speaker & microphone, Microsoft Windows OS(7 or later) with admin rights to install software, and good internet connectivity
- Code::Blocks IDE for C programming (freeware from www.codeblocks.org)
- MPLAB IDE: MPALB X (provided by CQU on lab computers) or later and MCC18 C compiler(free download from Microchip website)

Referencing Style

All submissions for this unit must use the referencing style: <u>Harvard (author-date)</u> For further information, see the Assessment Tasks.

Term Specific Information

The compulsory residential school will be held in Rockhampton from 25th Match to 27th March 2020.

Assessment Tasks

1 Assignment 1 - C language programming

Assessment Type

Written Assessment

Task Description

This assignment is baced on C language programming. The essential C language skills needed for embedded microcontroller programming will be tested here and students should develop their own solutions to the given problems. Try to analyse the system first and develop a concept solution, develop a graphical representation of it first before start coding. All evidence of your own work including a soft copy of your workbook should be provided as evidence. This is an individual assessment item and no teamwork or contribution from others allowed.

Assessment Due Date

Return Date to Students

Marked assignment with feedback. However, there will be no model answers provided.

Weighting

25%

Assessment Criteria

Detailed assessment criteria is in the assignment itself.

This assignment is based on C language programming skills. To obtain full marks students must provide all in detail problem solving and solution development evidences. Each student must have their unique programs developed by themselves. Answer to every problem should include a flowchart / NS-diagram or other similar graphical representation of the solution. Students should submit the complete working C language code for each question. A clean working program as the answer to a question without evidence of development of it(ex: without a soft copy of workbook pages relevant to it) will receive a maximum of 50% of the allocated marks for that question.

Referencing Style

• Harvard (author-date)

Submission

Online

Submission Instructions

Online submission as a single WORD file and complete program listing for each question to be included in the answer. The program listings should be able to compile without modifications when copied and pasted on Code:Blocs compiler's editor.

Learning Outcomes Assessed

• Apply fundamental structured programming knowledge to develop software solutions

Graduate Attributes

- Communication
- Problem Solving
- Critical Thinking
- Information Literacy
- Information Technology Competence
- Ethical practice

2 Hardware Programming using CQU PIC Development kit

Assessment Type

Written Assessment

Task Description

This assignment is baced on essential C language programming skills needed for embedded microcontroller programming. The embedded hardware programming skills will be tested here and students should develop their own solutions to the given problems. Try to analyse the system first and develop a concept solution, develop a graphical representation of it first before start coding. All evidence of your own work including a soft copy of your workbook should be provided as evidence.

This assignment is based on CQU PIC development board and all programs must be developed with MPLAB X IDE and in C language. More technical details will be provided with the assignment.

This is an individual assessment item and no teamwork or contribution from others allowed.

Assessment Due Date

Return Date to Students

Marked assignment with feedback. However, there will be no model answers provided.

Weighting

25%

Assessment Criteria

Detailed assessment criteria is in the assignment itself.

To obtain full marks students must provide all in detail problem solving and solution development evidences. Each student must have their unique programms developed by themselves. Answer to every problem should include a flowchart/ NS-diagram or other similar graphical representation of the solution. Students should submit the complete working C language code for each questionA clean working program as the answer to a question without evidence of development of it(ex: a soft copy of workbook pages relevant to it or explanation os your code) will receive a maximum of 50% of the allocated marks for that question.

Referencing Style

• Harvard (author-date)

Submission

Online

Submission Instructions

Online submission as a single WORD file and complete program listing for each question to be included in the answer. The program listings should be able to compile without modifications when copied and pasted on MPLABX MCC18 C compiler's editor.

Learning Outcomes Assessed

- Program a microcontroller to interface with external devices such as analog and digital sensors, actuators and computers
- Analyse and design microcontroller based real-time applications using a given industry standard development system and software tools
- Prototype an embedded microcontroller system for an authentic application
- Work autonomously and as a team member to analyse problems and present solutions.

Graduate Attributes

- Communication
- Problem Solving
- Critical Thinking
- Information Literacy
- Information Technology Competence
- Ethical practice

3 Portfolio

Assessment Type

Portfolio

Task Description

Project Details This is the major project in this unit and it is an open ended project. Student can decide the project in consultation with the lecturer and tutors and must finalize it by the end of week 3. The main hardware used is the CQU PIC Development kit and the sensor/actuator board provided by CQU in around 3rd week of the term. Students are free to use any additional sensors, actuators, and accessories to the project at their own cost. Students develop a working

prototype of an embedded system solution for a real world problem. Project outcome(developed prototype) will be tested towards the end of the term.

Portfolio Details

Portfolio is an individual submission based on their individual project. It must contain the following items and **omission of any of them will result in a Fail Grade:**

Project report containing(but not limited to)

Executive summary

Problem definition

Project scope

Solution development report(concept level to programming level)

Project management report

Project development report(actual physical prototype fabrication)

Results and discussion

Lessons learnt and recommendations for future development

Programming report (your complete programming listing of the project)

A copy of peer review of assigned student project(format will be available in Moodle).

Individual workbook (scanned /electronic copy of your workbook including your hand-written work)

Evidence of timely completion of project tasks Problem definition

Assessment Due Date

Return Date to Students

The portfolio will not be returned until the unit grades are released as there is no final examination for this unit.

Weighting

50%

Minimum mark or grade

50% of the allocated marks.

Assessment Criteria

The portfolio marks will be allocated to the project depth, successfulnes of each individual element, successfulness of integrating all elements into a complete working prototype, and professional documentation related to project. The portfolio marks will be allocated to the level of the project, the level of successful completion, the level of programming techniques and effective memory usages etc.

Detailed description of portfolio assessment criteria will be available in Moodle.

Academic Integrity Statement

As a CQUniversity student you are expected to act honestly in all aspects of your academic work.

Any assessable work undertaken or submitted for review or assessment must be your own work. Assessable work is any type of work you do to meet the assessment requirements in the unit, including draft work submitted for review and feedback and final work to be assessed.

When you use the ideas, words or data of others in your assessment, you must thoroughly and clearly acknowledge the source of this information by using the correct referencing style for your unit. Using others' work without proper acknowledgement may be considered a form of intellectual dishonesty.

Participating honestly, respectfully, responsibly, and fairly in your university study ensures the CQUniversity qualification you earn will be valued as a true indication of your individual academic achievement and will continue to receive the respect and recognition it deserves.

As a student, you are responsible for reading and following CQUniversity's policies, including the **Student Academic Integrity Policy and Procedure**. This policy sets out CQUniversity's expectations of you to act with integrity, examples of academic integrity breaches to avoid, the processes used to address alleged breaches of academic integrity, and potential penalties.

What is a breach of academic integrity?

A breach of academic integrity includes but is not limited to plagiarism, self-plagiarism, collusion, cheating, contract cheating, and academic misconduct. The Student Academic Integrity Policy and Procedure defines what these terms mean and gives examples.

Why is academic integrity important?

A breach of academic integrity may result in one or more penalties, including suspension or even expulsion from the University. It can also have negative implications for student visas and future enrolment at CQUniversity or elsewhere. Students who engage in contract cheating also risk being blackmailed by contract cheating services.

Where can I get assistance?

For academic advice and guidance, the <u>Academic Learning Centre (ALC)</u> can support you in becoming confident in completing assessments with integrity and of high standard.

What can you do to act with integrity?

Be Honest

If your assessment task is done by someone else, it would be dishonest of you to claim it as your own

Seek Help

If you are not sure about how to cite or reference in essays, reports etc, then seek help from your lecturer, the library or the Academic Learning Centre (ALC)

Produce Original Work

Originality comes from your ability to read widely, think critically, and apply your gained knowledge to address a question or problem
