

MEDI11002 *Physics for Health Sciences*

Term 1 - 2023

Profile information current as at 20/09/2024 01:38 pm

All details in this unit profile for MEDI11002 have been officially approved by CQUniversity and represent a learning partnership between the University and you (our student). The information will not be changed unless absolutely necessary and any change will be clearly indicated by an approved correction included in the profile.

General Information

Overview

This unit creates the foundations for an understanding of physics as it applies to our world around us, our bodies and our clinical environments. You will learn how to explain observed phenomena, predict changing behaviour and communicate using science conventions. You will apply problem-solving skills and knowledge of physics to find reasonable solutions to both word- and numerical-based situations.

Details

Career Level: *Undergraduate*

Unit Level: *Level 1*

Credit Points: 6

Student Contribution Band: 8

Fraction of Full-Time Student Load: 0.125

Pre-requisites or Co-requisites

There are no requisites for this unit.

Important note: Students enrolled in a subsequent unit who failed their pre-requisite unit, should drop the subsequent unit before the census date or within 10 working days of Fail grade notification. Students who do not drop the unit in this timeframe cannot later drop the unit without academic and financial liability. See details in the [Assessment Policy and Procedure \(Higher Education Coursework\)](#).

Offerings For Term 1 - 2023

- Mackay
- Online

Attendance Requirements

All on-campus students are expected to attend scheduled classes - in some units, these classes are identified as a mandatory (pass/fail) component and attendance is compulsory. International students, on a student visa, must maintain a full time study load and meet both attendance and academic progress requirements in each study period (satisfactory attendance for International students is defined as maintaining at least an 80% attendance record).

Website

[This unit has a website, within the Moodle system, which is available two weeks before the start of term. It is important that you visit your Moodle site throughout the term. Please visit Moodle for more information.](#)

Class and Assessment Overview

Recommended Student Time Commitment

Each 6-credit Undergraduate unit at CQUniversity requires an overall time commitment of an average of 12.5 hours of study per week, making a total of 150 hours for the unit.

Class Timetable

[Regional Campuses](#)

Bundaberg, Cairns, Emerald, Gladstone, Mackay, Rockhampton, Townsville

[Metropolitan Campuses](#)

Adelaide, Brisbane, Melbourne, Perth, Sydney

Assessment Overview

1. **Online Quiz(zes)**

Weighting: 40%

2. **Online Test**

Weighting: 60%

Assessment Grading

This is a graded unit: your overall grade will be calculated from the marks or grades for each assessment task, based on the relative weightings shown in the table above. You must obtain an overall mark for the unit of at least 50%, or an overall grade of 'pass' in order to pass the unit. If any 'pass/fail' tasks are shown in the table above they must also be completed successfully ('pass' grade). You must also meet any minimum mark requirements specified for a particular assessment task, as detailed in the 'assessment task' section (note that in some instances, the minimum mark for a task may be greater than 50%). Consult the [University's Grades and Results Policy](#) for more details of interim results and final grades.

CQUniversity Policies

All University policies are available on the [CQUniversity Policy site](#).

You may wish to view these policies:

- Grades and Results Policy
- Assessment Policy and Procedure (Higher Education Coursework)
- Review of Grade Procedure
- Student Academic Integrity Policy and Procedure
- Monitoring Academic Progress (MAP) Policy and Procedure – Domestic Students
- Monitoring Academic Progress (MAP) Policy and Procedure – International Students
- Student Refund and Credit Balance Policy and Procedure
- Student Feedback – Compliments and Complaints Policy and Procedure
- Information and Communications Technology Acceptable Use Policy and Procedure

This list is not an exhaustive list of all University policies. The full list of University policies are available on the [CQUniversity Policy site](#).

Previous Student Feedback

Feedback, Recommendations and Responses

Every unit is reviewed for enhancement each year. At the most recent review, the following staff and student feedback items were identified and recommendations were made.

Feedback from Teaching team observations

Feedback

Even with weekly tutorial sessions included in the timetable to ensure students plan their availability for the class, relatively few students attend and many students do not recognise how the tutorials help them build skills for assessment as well as supporting theory knowledge. If students see a more explicit connection between tutorials and assessment success, participation may increase.

Recommendation

Continue to develop more discussions within the tutorials, as began last year.

Feedback from Teaching team observations

Feedback

The provision of individualised feedback with the introduction of a global video feedback in Term 1 2022 reduced student queries regarding marking and where they lost marks.

Recommendation

Maintain the provision of a combination of individualised feedback and global video feedback in future iterations of the unit.

Feedback from Teaching team observations

Feedback

Online tutorial sessions are not well attended especially following university break.

Recommendation

Review the number and timing of online tutorials in future deliveries of the unit.

Unit Learning Outcomes

On successful completion of this unit, you will be able to:

1. Discuss fundamental concepts, theories and principles of classical mechanics, matter, heat, sound, electromagnetism, electromagnetic energy and the atom
2. Apply fundamental physics concepts, theories and principles to explain physical phenomena of everyday life and clinical situations and to predict outcomes under changing conditions
3. Use problem-solving and numeracy skills, knowledge of fundamental physics concepts, theories and principles, and standard conventions of science communication to present reasonable solutions to problems.

Alignment of Learning Outcomes, Assessment and Graduate Attributes

Alignment of Assessment Tasks to Learning Outcomes

Assessment Tasks	Learning Outcomes

Module/Topic	Chapter	Events and Submissions/Topic
--------------	---------	------------------------------

Term Specific Information

You are expected to spend on average 10 - 12 hours of time each week in your study activities for this unit. A suggested time budget for weekly study is:

- 2 - 2½ hours for watching recorded lectures and taking notes
- 1 - 1½ hours for completing assigned reading
- ½ - 1 hour for completing other posted learning activities
- 2 - 2½ hours for creating study notes to meet weekly learning goals using the lectures and readings
- 1 - 1½ hours for applying weekly content using posted end-of-chapter questions
- ½ - 1 hour for working on posted tutorial questions in preparation for tutorial
- 1 hour for participation in tutorial
- 1 - 2 hours for preparation and/or revision for assessments

Tutorials are interactive sessions where your participation enables you to check your understanding of and your ability to apply the week's concepts and for you to build your skills in responding to test questions. From Week 2 onward, the scheduled tutorial covers concepts from the previous week. This enables you to use the tutorial to consolidate your knowledge from the week's study. Your regular participation in tutorials strongly supports your success in the unit. While recordings of online tutorials will be provided (if there is sufficient student attendance), these recordings are not intended to replace your active participation in live sessions.

Assessment Tasks

1 In-term online tests

Assessment Type

Online Quiz(zes)

Task Description

As a future healthcare professional, you need to be able to harness core physical concepts and terminology to predict and explain observations in your clinical environment. You will be required to complete two In-term online tests during the term. The aim of these In-term online tests is for you to demonstrate your knowledge, understanding and ability to apply core physics concepts and correct use of terminology that you will be learning in this unit.

Both the tests will be made available via the unit Moodle site. Each In-term online test will be time-limited and once you open the test, you will not be able to pause or restart it. Once opened, the In-term online tests will remain open for a specified duration and will automatically close once the specified time is up. Any unanswered questions or unsaved responses will receive a mark of zero.

In-term online test 1

- The test contributes 15% towards the final unit grade.
- *This test will be held on **Wednesday 5th April 2023 in Week 5** and it will be assessing the first three weeks (i.e. Weeks 1-3) of content covered in this unit.*
- The test will be **available from 8:00am - 8:00pm AEST** on Wednesday 5th April 2023.
- *This test is **time-limited to 45 minutes**.*

In-term online test 2

- The test contributes 25% towards the final unit grade.
- *This test will be held on **Wednesday 17th May 2023 in Week 10** and it will be focusing on content covered from Weeks 4-8 in the unit. You will also be expected to integrate concepts and apply terminology from the first three weeks of study when completing this test.*
- The test will be **available from 3:00pm - 8:00pm AEST** on Wednesday 17th May 2023.
- *This test is **time-limited to 60 minutes**.*

All questions will be based on the posted weekly learning goals. Question tasks will be a similar type to those discussed in weekly tutorials. The tasks may include analysis of diagrams, photographs and/or images. Questions may include quiz-style questions (for example multiple choice, fill-in -the blank, matching), true/false with explanation and written response. When completing the test, you will be required to:

- demonstrate logical application of concepts and ability to articulate them
- discuss the physics related to a given situation in terms of explaining why the situation has occurred, what would happen if the situation was altered in a specific way, how to achieve a specific outcome in altering the situation and/or what outcome would logically follow the occurrence of the situation
- solve numerical problems
- use terminology correctly

The number of marks for each question are allocated based on the depth and breadth of the required response and will be indicated on the test.

This is an open book test. It means that during the test you may access your study notes, textbook, the unit Moodle site and/or any website. Although the test is an open book assessment, you must remain mindful of the time you are taking to answer each question and have an understanding of the content and also familiarity with your resources to use them effectively. You should not expect to have the time to consult your notes and/or other resources for every question.

The standards of academic integrity still apply. Just as for the written assignments, you must acknowledge content that is not your own - if you paraphrase from external sources other than the textbook or lectures, you must formally cite your source. If you copy any content word-for-word from ANY source, you must put that content in quotation marks and formally cite your source.

Your test response must be your own work. You cannot seek assistance or make use of assistance from another person during the test. You may not communicate with any other person during the test (whether verbally, electronically or in writing) for any purpose relating to the test questions or your responses. You may not share the test content with any other person for any reason. At the start of the test, you will need to make a declaration that you understand these rules of academic integrity and that you agree to abide by them. Any identified cases of potential collusion will result in a breach of academic integrity case being raised.

You will need to ensure that you have reliable internet access and a computer for this test. It is highly recommended that you do not attempt the test using a tablet or smartphone due to the quantity of typing required.

It is your responsibility to log on to the unit Moodle site and complete the online test during the time the test is available. If you start the test late, you will still be required to submit at the stated closing time. In the absence of an approved extension, you cannot complete this assessment at a later time, and you will receive a mark of zero for the assessment if you have not submitted it by the scheduled date and time.

Other

Assessment Due Date

In-term online test 1 will be available from 8:00am - 8:00pm AEST on Wednesday 5th April 2023. In-term online test 2 will be available from 3:00pm - 8:00pm AEST on Wednesday 17th May 2023.

Return Date to Students

Feedback for each In-term online test will be provided within two weeks of the due date for the test.

Weighting

40%

Assessment Criteria

Question responses will be scored on the following criteria:

- correct use of terminology
- correct selection and application of core concepts to the specific content of the question
- clarity, correctness, relevance and completeness of the response in addressing the question that was asked
- critical thinking

The expected depth of response to each question is indicated by the number of marks for the question. unless otherwise specified, you are expected to provide one key factual or logical point (typically one to two sentences) for each mark (For example, a question worth five marks should have five key points included in the response).

- Use problem-solving and numeracy skills, knowledge of fundamental physics concepts, theories and principles, and standard conventions of science communication to present reasonable solutions to problems.

2 Final Online Test

Assessment Type

Online Test

Task Description

As a future healthcare professional, you need to be able to harness core physical concepts and terminology to predict and explain observations in your clinical environment. You will complete a 90 minute time-limited final online test. The purpose of this test is for you to demonstrate your knowledge, understanding and ability to apply core physics concepts and correct use of terminology that you will be learning in this unit.

This test will be made available via the unit Moodle site on from 9:00am to 11:00am AEST on Wednesday 7th June 2023 in Review/Exam Week. Note that the posted due date/time is the latest submission time, not the test start time. The test will be **time-limited to 90 minutes** and once you open the test, you will not be able to pause or restart it. Once opened, the test will remain open for 90 minutes and will automatically close once 90 minutes is up (or at the submission time if you have started the test with less than 90 minutes to the submission time) . Any unanswered questions or unsaved responses will receive a mark of zero.

It is your responsibility to log on to the unit Moodle site and complete the online test during the time the test is available. If you start the test late, you will still be required to submit at the stated closing time.

All questions will be based on the posted weekly learning goals. Question tasks will be a similar type to those discussed in weekly tutorials. The tasks may include analysis of diagrams, photographs and/or images. Questions may include quiz-style questions (for example multiple choice, fill-in -the blank, matching), true/false with explanation and written response. When completing the test, you will be required to:

Academic Integrity Statement

As a CQUniversity student you are expected to act honestly in all aspects of your academic work.

Any assessable work undertaken or submitted for review or assessment must be your own work. Assessable work is any type of work you do to meet the assessment requirements in the unit, including draft work submitted for review and feedback and final work to be assessed.

When you use the ideas, words or data of others in your assessment, you must thoroughly and clearly acknowledge the source of this information by using the correct referencing style for your unit. Using others' work without proper acknowledgement may be considered a form of intellectual dishonesty.

Participating honestly, respectfully, responsibly, and fairly in your university study ensures the CQUniversity qualification you earn will be valued as a true indication of your individual academic achievement and will continue to receive the respect and recognition it deserves.

As a student, you are responsible for reading and following CQUniversity's policies, including the [Student Academic Integrity Policy and Procedure](#). This policy sets out CQUniversity's expectations of you to act with integrity, examples of academic integrity breaches to avoid, the processes used to address alleged breaches of academic integrity, and potential penalties.

What is a breach of academic integrity?

A breach of academic integrity includes but is not limited to plagiarism, self-plagiarism, collusion, cheating, contract cheating, and academic misconduct. The Student Academic Integrity Policy and Procedure defines what these terms mean and gives examples.

Why is academic integrity important?

A breach of academic integrity may result in one or more penalties, including suspension or even expulsion from the University. It can also have negative implications for student visas and future enrolment at CQUniversity or elsewhere. Students who engage in contract cheating also risk being blackmailed by contract cheating services.

Where can I get assistance?

For academic advice and guidance, the [Academic Learning Centre \(ALC\)](#) can support you in becoming confident in completing assessments with integrity and of high standard.

What can you do to act with integrity?

Be Honest

If your assessment task is done by someone else, it would be dishonest of you to claim it as your own

Seek Help

If you are not sure about how to cite or reference in essays, reports etc, then seek help from your lecturer, the library or the Academic Learning Centre (ALC)

Produce Original Work

Originality comes from your ability to read widely, think critically, and apply your gained knowledge to address a question or problem
