General Information

Overview

Businesses are at the dawn of a fourth industrial revolution, propelled by frontier technologies and robotization advances that make the production better, cheaper and faster than ever before. This new industrial revolution offers enormous opportunities for businesses to grow and gain sustainable development with potential benefits on a scale that is difficult to imagine. New technologies promise possibilities of industrial upgrading and leapfrogging. Reconfiguration of world businesses environment, cheaper transportation and communication, coupled with more efficient logistics now help businesses to establish links to new global value chains. Strategic intuitiveness and ability to quickly manage change is key to gain competitive positioning in the global context. As the capstone unit, you will integrate prior functional and interpersonal knowledge and skills acquired in previous units of the Master of Business Administration and examine strategic management processes at an advanced level in different kinds of organisations. You will use your advanced level of knowledge and skills to analyse how organisations develop future strategies which are influenced by internal and external pressures. By examining the challenges facing contemporary businesses, you will examine how strategic management concepts, frameworks and tools are used by business executives to develop a business plan and implement change in organisations. Workplace case studies will be used to demonstrate how business craft strategies and acquire resources to implement strategy and manage change effectively with positive outcomes.
