General Information

Overview

This unit introduces you to the discipline of human factors and how a knowledge of human strengths and limitations, both cognitive and physical, can lead to better safety outcomes. This unit addresses end-user design issues and human variability in occupational contexts. You will explore human factors principles and learn to assess human interaction concerns using a variety of human factors methods. You will also develop skills to make human factors design recommendations to enhance human performance.

Previous Student Feedback

Feedback, Recommendations and Responses

Every unit is reviewed for enhancement each year. At the most recent review, the following staff and student feedback items were identified and recommendations were made.

Feedback from Student Unit and Teaching Evaluation comments

Feedback

Student expectations of what the tutorials should contain needs to be clarified. In this unit the lectures cover the theory behind Human Factors, while the tutorials cover practical skills in the field that are needed and useful for completing assessment tasks.

Recommendation

In the welcome message, remind students that they need to attend/watch all lectures and tutorials as each of these cover different topics.

Feedback from Student Unit and Teaching Evaluation comments

Feedback

Students expressed a desire to divide the team and individual grades for teamwork assignments equally.

Recommendation

During the tutorial on assessment work, elaborate on the reasons behind the division of grades for the team and individual components of a team project. Specifically, note that equal grades for the team and individual efforts tends to lead to reduced team effort and often a poorer final outcome for all students..
