General Information

Overview

In this unit you will consider some of the latest theories in the Safety Sciences, particularly in relation to the concept of resilience in organisations and broader organisational culture issues. The factors which influence the quality and validity of decision making within organisations, such as, values, mindfulness, culture, adaptive systems, participation and leadership in complex socio-technical systems will be considered. You will critically reflect on and evaluate theories such as resilience engineering, high reliability organisations, safety culture and safety climate, and discuss the usefulness of these theories to practice. You will also have the opportunity to evaluate the usefulness of the tools and methods available to measure and monitor factors that affect resilience and other safety science concepts within organisations.

Previous Student Feedback

Feedback, Recommendations and Responses

Every unit is reviewed for enhancement each year. At the most recent review, the following staff and student feedback items were identified and recommendations were made.

Feedback from Unit Coordinator Reflection

Feedback

There is a need to emphasise the importance of including references to support claims (which could otherwise indicate use of artificial intelligent language applications) as well as the existence of self plagiarism, even at the third-year level to circumvent further misunderstandings.

Recommendation

Before each assessment submission, remind students of their academic integrity responsibilities, and provide some tips for avoiding plagiarism, including self-plagiarism.

Feedback from Unit Coordinator Reflection

Feedback

Students enjoy the critical thinking tasks associated with this unit.

Recommendation

Retain the critical thinking assessment tasks.
