General Information

Overview

Communicable diseases transmit from human to human or animal to human. They form a major component of the global burden of disease, thus presenting a significant public health challenge. Developments in health technologies, pharmaceuticals and other preventative approaches and treatments have decreased the impact of communicable diseases over the last century particularly. However, this is countered by an increasing risk of emerging and re-emerging communicable disease outbreaks across borders, in part due to the exponential increase in global travel and the expansion of the human-animal interface. This unit explores the knowledge, principles and skills required to address communicable diseases prevention and control. You will examine the epidemiology of communicable diseases and its relationship to prevention, management and control strategies from a public health perspective. Surveillance and other public health strategies on communicable diseases control are studied. Case studies are used to develop insights into public health responses to communicable diseases control, challenges and facilitators. The unit applies a critical lens to the essential role of cross-sectoral collaboration and partnerships in effective communicable disease strategies and policies.
